NORDAC 2012

Tenth Nordic Conference on

Electricity Distribution System Management and Development

Espoo, Finland
10-11 September 2012

ELFORSK

ELFORSK – SWEDISH ELECTRICAL
UTILITIES' R&D COMPANY

In cooperation with

Aims and scope

One of the main future challenges for the entire energy sector will be making substantial reductions in emissions of greenhouse gasses while ensuring a secure supply of energy at a reasonable cost. EU has launched its 2020 targets (20% cut in emissions, 20% improvement in energy efficiency and 20% increase in renewables) as a very important part of the solution.

The distribution system is expected to play a key role as further generation is implemented at the distribution level; changes in the consumption pattern due to electric vehicles, heat pumps, energy efficiency and Demand Response enabled by smart metering etc. will require large investments to facilitate future needs. Utilities as well as academia play a very important role in the development and implementation of intelligent solutions. The future electricity distribution system must be smarter !

The NORDAC 2012 conference will give participants the possibility to discuss these and other future challenges and solutions, as well as disseminate experiences regarding technical, economic and regulatory issues.

The conference covers the following areas:

- 1. Distribution system development and operation**
- 2. Asset management**
Aging infrastructure management – Maintenance – Life time estimation – Risk management
- 3. Generation at the distribution level**
Prospects and consequences of generation at the distribution level – Micro generation.
- 4. Regulation of DSOs**
Regulatory issues – Trends – Challenges
- 5. Quality of supply and EMC**
- 6. Distribution automation**
Distribution utility ICT - Applications – SCADA– Control – Protection
- 7. Active grids – Active loads – Active Customers - Prosumers**
- 8. Electric vehicles**
Technology – Connection issues – Impact on load profiles
- 9. Smart metering**
Automatic meter management – Demand Response – DSM
- 10. Distribution network components**
Design and technology innovation – Components in future power systems
- 11. Energy Efficiency**
Local energy planning – Environmental aspects – Sustainability
- 12. Multi utility**
New business models – Management of parallel infrastructures

NORDAC provides a forum where the electricity distribution community and industry meets. The participants will meet colleagues from the other Nordic countries and the Baltics for discussions of existing practises and important future challenges.

The organisers need your valuable contribution to ensure that the forthcoming conference will be as successful as the nine previous events. All aspects of research and development in the electricity distribution sector will be welcomed, both papers with scientific as well as practical engineering considerations.

In cooperation with CIRE

Cired - International Conference on Electricity Distribution- is the leading forum where the international electricity distribution community meets. CIRE works for the purpose of increasing the business relevant competencies, skills and knowledge of those participating in CIRE's activities. CIRE offers a biennial conference and exhibition where developments and best practices in technology and management of the technical side of electricity distribution are presented. Between conferences CIRE may organise specific Working Groups on current subjects of key interest to the electricity distribution community.

Information available at www.cired.net

The next event will be held in Stockholm, Sweden on 10-13 June 2013
